ILO Meeting  
November 26, 2013

1. Introduction of new member  
2. Dawn and Todd – report back on quantitative reasoning and WASC  
3. End of Year report – final edits  
4. To do next year

Notes:

1. Dawn and Todd met with Reed to discuss the core competencies regarding quantitative reasoning. There is a feeling that what quantitative reasoning is as it was presented there is not what we had been thinking it was. It is not mathematical reasoning. There is the issue of if we can set the standard of performance at the foundational level – at the institutional level the standards need to be high for all five core competencies. The message at WASC retreat was that this new way of thinking about quantitative reasoning implies a culture shift in how we teach some stuff in a variety of disciplines.

2. For the ILOs, we will need to fit Quantitative Reasoning into the ILOs and make sure that they are integrated. These are found in conducting research, critical thinking,

3. We will need to engage in active information gathering – organize this by college and/or professional programs.

4. Memo update – have to document how the ILOs meet the WASC requirements. This memo lays out a plan for how we will meet/implement the ILOs and meet the core competency requirements.
